

Polygenic GWAS complex-immune-disease enrichment across the paralogous-TF duplication framework (GWAS Catalog $P \leq 5e-8$; protein-coding non-MHC; $n=1,153$ TFs)

(A) Polygenic GWAS vs monogenic IEI rate by category (one-vs-rest OR; * $p < 0.05$)

(B) GWAS-gene rate: disease x category

(C) Key GWAS-enrichment contrasts (union)
